- Collaborated with staff and management to prioritise IT infrastructure and hardware improvements, enhancing uptime and user productivity.
- Coordinated infrastructure maintenance and internal security/compliance practices.

PROJECTS

CivPlayers Civ3 League

Tallaght, IE

(React, TypeScript, Vite, Tailwind CSS, Google Sheets API, GitHub Pages)

Sep 2025 – Oct 2025

- Built and deployed a league web app with leaderboards, events, and admin tooling; 100% uptime since launch.
- Implemented an ELO-based team balancing algorithm with <100ms computation time for 8-player inputs.
- Set up CI/CD with GitHub Actions and social share metadata; boosted external link engagement by 45%.
- Authored a structured README file and created video tutorials to guide content updates and admin panel usage.
- Ongoing project maintainer: continuously evolving codebase and adding new features based on community needs.
- Prepared an admin panel for non-technical users with JSON export; reduced update time by 80%.

SmartRoute

(Java, ASP.NET Core Web API, Azure SQL Database)

Feb 2025 – Apr 2025

- Developed Android app enabling users to plan multi-stop journeys with real-time autocomplete (Google Places API); optimized route generation time by ~40% through efficient API calls.
- Built Android front-end integrated with custom Azure APIs; reduced API response latency to <250ms average.
- Aligned technical design to business requirements and system performance targets, supporting best-practice process implementation.

Rencloud

(C#, .NET 8, FFmpeg, LibVLC, GitHub Actions)

Sep 2024 – May 2025

- Developed a Windows-based video editing environment allowing users to trim, split, and rearrange video/audio clips on a timeline with live preview; improved render responsiveness by ~25% during internal tests.
- Integrated FFmpeg and VLC/LibVLC for real-time playback, supporting 15+ media formats.
- Integrated a GitHub Actions pipeline with SonarQube quality gates, reducing code defects per merge by ~30%, and automated packaging with WiX Toolset for one-click MSI deployment.

BreachExplorer

(C#, Blazor WebAssembly, ASP.NET Core Web API, Chart.js, Azure App Service)

Oct 2024 – Dec 2024

- Designed and deployed responsive SPA describing breach statistics from 3 external APIs; improved client-side load times by 35%.
- Single-page app that queries “Pwned” APIs to display global breach statistics, list the top 15 incidents, and present per-company charts with real-time orientation and dataset toggles.
- Feature checking a user-supplied email via a custom ASP.NET Core Web API proxy (hosted on Azure App Service) to bypass CORS-restricted endpoints, then surfaces breach details and personalized guidance about the email.
