Professional Summary

Software developer working as an independent contractor for a Shopify Partner agency, on live headless React and Next.js storefronts and Shopify Liquid themes. Has also built full-stack C#/.NET and ASP.NET Core applications, a Windows video editor with a custom timeline engine and a React platform for an online gaming community. Writes typed, tested code and traces problems through third-party APIs. First Class Honours BSc in Computing, TU Dublin (GPA 3.73/4.00); open to fully remote frontend or full-stack work.

Technical Skills

Frontend: React 19, Next.js (App Router), TypeScript, JavaScript, HTML, CSS, Tailwind CSS, responsive design, accessibility (ARIA, keyboard), Blazor WebAssembly

Backend and APIs: Node.js, REST APIs, GraphQL, C#/.NET, ASP.NET Core Web API, SQL (PostgreSQL), Java

E-commerce: Shopify Liquid, Online Store 2.0 sections and JSON templates, metafields and metaobjects, Storefront API, Admin GraphQL API, Search & Discovery

Testing, tooling and CI/CD: Vitest, Playwright, MSTest, Git/GitHub, GitHub Actions, SonarQube, Docker, Vercel, Render

Languages: Romanian (native), English (fluent), Russian (fluent)

Professional Experience

Frontend Developer (Independent Contractor) — DOT (High Quality Digital SRL) Sep 2026 – Present
Remote · Independent contractor, project-based agreement with a Shopify Partner agency

- Delivered frontend work for five of the agency's client stores, all now live – two headless Next.js storefronts (VGR, Parflab) and three Shopify Liquid themes (Ella Cosmetic, Florentino Delure, MonManor).
- Shipped 46 merged pull requests through review by the agency lead – 33 of them on VGR in three weeks – and wrote 190+ Vitest unit tests across the two headless codebases.
- Worked directly with the VGR client day to day, clarifying requirements, walking through changes and turning feedback rounds into shipped features.

Webflow Developer & Content Creator (Freelance) — ItSpot Tallaght Computer Repairs Mar 2024 – Sep 2024
Tallaght, Dublin · Freelance

- Built and launched the business's responsive Webflow CMS website, set up so staff publish their own updates.
- Wrote editor documentation, trained staff and produced PC build and repair walkthrough videos.

Service Dispatcher — DWSmart LLC Jun 2024 – Sep 2024
Remote · Contract

- Coordinated daily truck dispatch and client communication for a small trucking fleet.

Student Intern (On-Campus Internship) — Technological University Dublin Jun 2023 – Sep 2023
Dublin · Summer internship

- Created data-tracking templates and scripted CSV exports for faculty reporting; wrote technical documentation.

Projects

VGR — Headless Shopify Storefront (DOT Client) Sep 2026
Next.js 16, React 19, TypeScript, Tailwind CSS, Storefront and Admin APIs, Vitest | vgr.store

- Implemented a product comparison table and specification filters from one shared metafield data model, normalising the client's specification data; kept the logic in pure TypeScript modules covered by 80+ unit tests.
- Diagnosed a broken price-range filter as the Storefront API narrowing price bounds to the active filter; fixed it with a separate, unfiltered bounds query and a regression test.
- Developed metaobject-driven video components – a scroller that plays only the centred clip (IntersectionObserver, reduced motion) and a collection carousel – plus an accessible gallery lightbox on the native dialog element.
- Modelled editable content in metaobjects and metafields, provisioned by Node.js Admin API scripts, so the client manages videos, specifications and FAQs in Shopify admin.

Parflab — Headless Perfume Store (DOT Client) Sep 2026
Next.js, TypeScript, next-intl, Node.js, Shopify Admin GraphQL API | parflab.ro

- Added consent-gated Meta Pixel tracking that loads only after cookie consent, reads consent from a useSyncExternalStore store (cross-tab sync, no hydration mismatch) and sends one PageView per navigation.
- Wrote a Node.js pipeline that composites product photos into a Figma-defined template, checks geometry and publishes 2,300+ images through the Admin GraphQL API in resumable, read-back-verified runs.
- Delivered first versions of seven features from Figma in 13 pull requests, later integrated by the agency lead.

Ella Cosmetic (SKYA) — Liquid Theme Extension (DOT Client) Sep 2026
Liquid, Eurus theme, Online Store 2.0, metaobjects and metafields, Admin API scripts | ella.md

- Extended a premium theme with 9 custom sections, 5 snippets and 15 JavaScript/CSS assets (~3.4k lines) used across 15 JSON templates, including per-range product templates and a drag, swipe and keyboard product rail.
- Created a metaobject-driven ingredient library with search and an A–Z index, and migrated legacy-site content with Admin API scripts, taking backups and verifying the result.

Florentino Delure — Campaign Landing Page (DOT Client) Sep 2026
Liquid sections and blocks, Dawn-based theme | florentinodelure.com

- Developed the first version of a CSR campaign landing page from editor-configurable Liquid sections and blocks; the page was later extended by others.

MonManor — Theme Configuration and Localisation (DOT Client) Sep 2026
Liquid, agency base theme, locale files | monmanor.md

- Configured store templates and completed the Romanian locale to clear missing translations.

CivPlayers Civ3 League (Independent Project) Sep 2025 – Oct 2025
React, TypeScript, Vite, Tailwind CSS, Chart.js | civplayersciv3league.com · GitHub

- Designed a team generator that evaluates every captain-draft split for 4–8 players to balance rating totals and shows each side's Elo win probability.
- Loaded league data from published Google Sheets CSV into sortable, searchable leaderboards for 8 game modes, with player profiles and charts, for an online gaming community.

BreachExplorer — Data-Breach Dashboard (University Project) Nov 2024
C#, Blazor WebAssembly, ASP.NET Core Web API, Docker, Playwright, GitHub Actions | Live app · GitHub

- Built a Blazor WebAssembly dashboard of breach data (latest breach, top-15 and comparison charts) backed by an ASP.NET Core proxy that keeps the Have I Been Pwned key server-side and avoids CORS limits.
- Implemented an email check that discovers sources through LeakCheck's public API and enriches each with Have I Been Pwned breach details, de-duplicating sources and throttling requests.
- Later containerised the API for Render and added a GitHub Actions pipeline that runs Playwright UI tests and publishes the client to GitHub Pages.

RenCloud — Windows Video Editor (University Project, final year) Oct 2024 – Apr 2025
C#, .NET Framework, WinForms, FFmpeg, LibVLC, MSTest, GitHub Actions, SonarQube | GitHub

- Designed and wrote, individually, a custom timeline engine with no UI SDK – a segment model with split, delete and drag-reorder that recalculates every clip position – plus frame thumbnails and audio waveforms.
- Chose LibVLC over Windows Media Player for continuous scrub preview, rendered output through FFmpeg, and set up GitHub Actions CI with a SonarQube quality gate and a WiX MSI installer.

SmartRoute — Route-Planning App (University Project) May 2025 – Jun 2025
Java (Android), ASP.NET Core Web API, PostgreSQL (Supabase), Google Directions and Places APIs, Docker | GitHub

- Built an Android client that plans an optimised multi-stop route with Google Directions and Places autocomplete, and shares each trip through a six-digit code.
- Wrote the REST API for trips and route steps (create, read, update and delete by share code); migrated storage from Azure SQL to Supabase PostgreSQL and redeployed on Render.

Education

BSc (Hons) Computing with Software Development 2022 – 2025
Technological University Dublin · **First Class Honours · GPA 3.73/4.00**

- Took part in three hackathons during the degree: Ethicon, RAD and Health (2024).

QQI Level 6 — Computer Networking and Cyber Security 2021 – 2022
Bray Institute of Further Education · **Distinction**

QQI Level 5 — Computer Systems and Networks 2020 – 2021
Bray Institute of Further Education · **Distinction**

Certifications & Training

- Certifications: freeCodeCamp — Responsive Web Design Certification (2026); freeCodeCamp — JavaScript Certification (2026)
- Course completion: AWS Academy — Cloud Foundations (AWS Academy Graduate badge)
- Training: Red Hat Academy — Program Learner badge (2024); VMware IT Academy — Cloud and Virtualization Concepts and Data Center Virtualization Core Technical Skills courses
